4th June'26

Your 5-Session Roadmap

Overview of Today's Webinar

01

What is Algo Trading?

The simple idea behind automated, rule-based trading

02

Key Benefits

Speed, discipline, backtesting, scale and consistency

03

Algo vs Traditional Trading

A side-by-side look at how the two really compare

04

Why Shift Now

The market, the tools and the cost of waiting

What is Algo Trading?

The core idea

A computer places your trades automatically, based on rules **you** decide in advance.

You define the rules.

The system watches, decides and executes - with no hesitation, no emotion and no missed exits.

No Coding. No machine learning. Just clear instructions.

The Key Benefits

Speed

Scans, decides and orders in milliseconds - not seconds.

Emotion-free

Follows the rule every time. No fear, no greed.

Backtesting

Prove a strategy on years of data before risking a rupee.

Scale

Monitor dozens of instruments at once, not two or three.

Consistency

Same process every day - the engine of compounding.

An honest note

It's no magic machine - a good strategy still matters.

Algo vs Traditional Trading

Factor	Manual Trading	Algo Trading
Execution speed	2–10 seconds	Milliseconds
Emotional discipline	Inconsistent	Perfect, every time
Instruments tracked	2–3 at a time	Dozens, at once
Consistency	Varies by mood	Identical daily
Backtesting	Not possible	Years of data

Where manual still wins: news, judgment and black-swan events. But **~90% of bread-and-butter trades can be automated.**

Why shift **Now**

01

Algos already dominate
Indian trading

02

The big profits are
made using algos

03

Algo tools are now
cheap and accessible

04

Algo trading is now
regulated by SEBI

The question isn't whether algos are taking over - **they already have.**

Today, in one line

- Algo trading = your rules, executed by a computer
- Five edges: speed, discipline, backtesting, scale, consistency
- ~90% of routine trades can be automated
- The market, the tools and compounding all favour shifting now

NEXT WEEK · SESSION 2

Building Your First Strategy

Turn a plain-English idea into clear rules, set entry & exit logic, and run your first backtest. No coding required.

Your homework

Write down ONE setup you trade manually - "I buy when... I sell when... my stop is..." We'll turn it into a real strategy next week.

Q&A

Ask anything - and I'll see you next week for Session 2.

Disclaimer

Investments in the securities market are subject to market risks, read all the related documents carefully before investing. Brokerage will not exceed the SEBI prescribed limit.
